

CSAM Plexus Portal

CSAM offers a complete clinical portal that makes all clinical data available to authorized users anywhere and anytime, using open industry standards and proven technical platforms. The solution facilitates interaction between healthcare professionals across hospitals and regions, and includes functionality for both integrated and specialised healthcare.

Digital interaction CSAM® Plexus™ Portal offers single seamless access to information from all integrated clinical systems, across departments and institutions. All necessary information is updated and available to the healthcare professionals connected to the patient, at all times.

Streamlining clinical processes CSAM® Plexus™ Portal strengthens the clinical work processes through a common workflow for clinical activities, orders, referrals, and investigation results, across clinical systems, both in and between healthcare institutions.

Agile organizational changes CSAM® Plexus™ allows the customer to introduce new and change old legacy health information systems while not affecting the overall cross-departmental and cross-institutional processes.

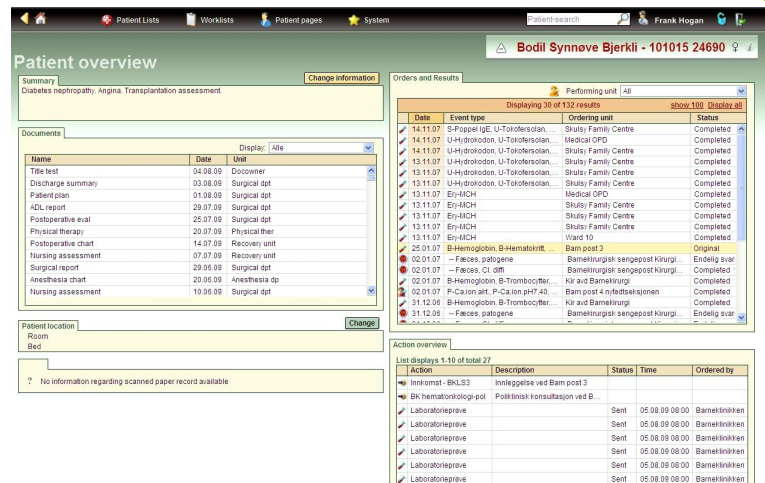

CSAM Plexus Portal

Delivering integrated patient care record at the point of care.

Patient Overview

The Patient Overview offers an overview of a patient, and displays lists of information which is registered for the given patient. From these lists detailed views of this information is available:

- Clinical documents
- Investigation results
- Critical information
- Planned and executed activities

Editable information:

- Summary and location of the patient.
- Patient Information
- Critical Information

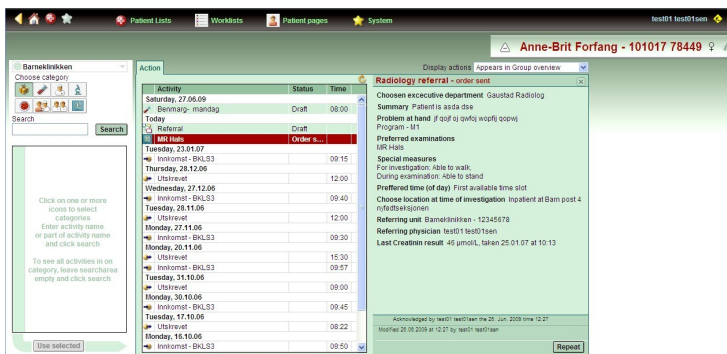

Patient List

The Patient List shows lists of patients based on organisational unit, date, activity, etc. The patient lists may be grouped to show capacity of a given department within a day, week or month. Through the Patient Search, the user may search for a given patient based on patient id or name. By selecting a patient, the Patient Card appears. The Patient Card presents detailed information fetched from the patient administration system (PAS).

Worklist

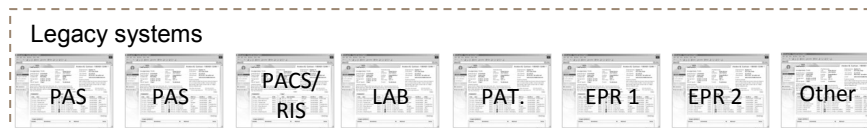

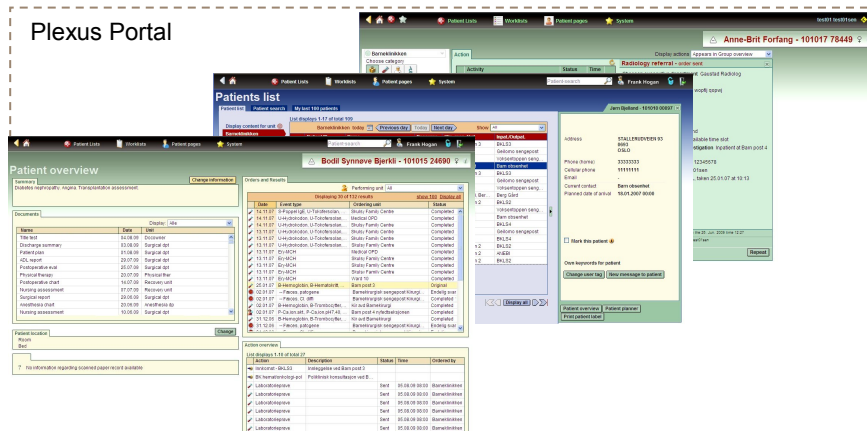

The worklist gives an overview of inbound reports; all laboratory and investigation results, based on the department and role of the user. Filtering and sorting functionality helps making the lists fit the user's needs.

Patient Planner

The Patient Planner includes functionality for planning activities for the patient, creating and sending referrals, ordering investigations and laboratory tests, and for registering executed activities. Detailed information concerning admission, discharge and other activities, both planned and executed, are also available.

CSAM Plexus Portal

Choice - freedom to choose IT strategy and to maintain existing legacy systems

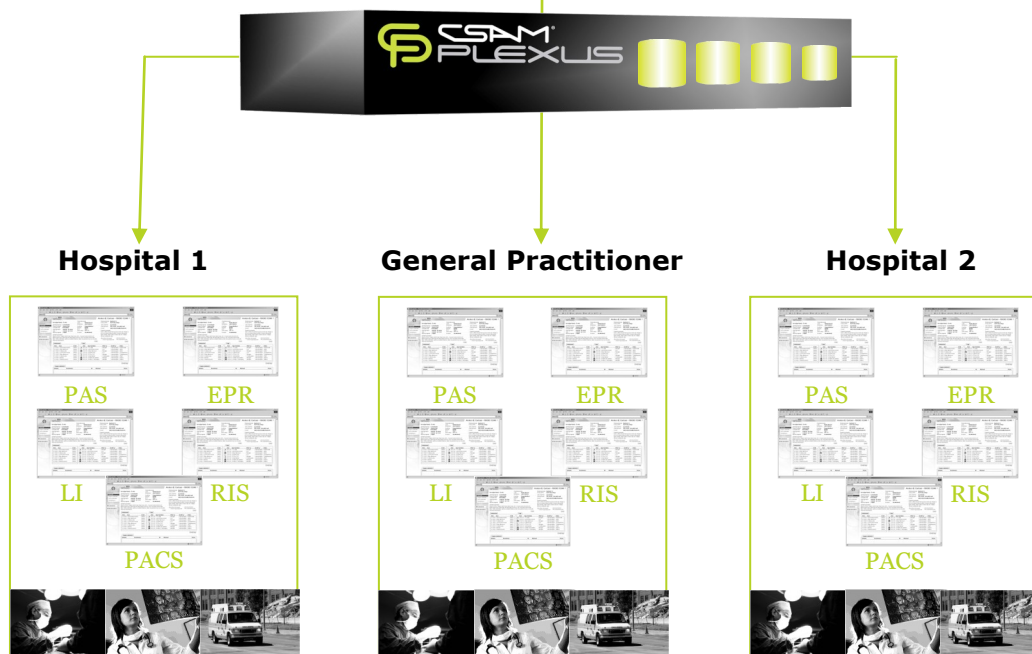

Speed - speed of adoption and return on investment through quick and safe implementation.

Access - access to all integrated systems at the point of care.

Management - manage all clinical information from a single view.

Single Seamless View

At the heart of CSAM AS is CSAM® Plexus™ an information and service collaboration tool designed to integrate existing applications and information within and between hospitals and healthcare professionals. CSAM® Plexus™ collects, transform and combines information from different data sources into a common information model through a coherent service layer.

The solution may be described as a digital bridge which connects the many systems within healthcare, from clinical systems to administrative systems. The IT-systems are coordinated through a web based portal which gives the healthcare professionals quick access to all relevant patient information. This patient information includes medical history and state, medical report, x-rays, laboratory results, investigation results, planned and executed activities, critical information, such as allergies, et cetera.

CSAM® Plexus™ contributes to interaction and cooperation between all healthcare professionals connected to the patient, and ensures updated and available information at all times. All information follow the patient regardless of where in the healthcare process the patient is situated. Hence, CSAM® Plexus™ streamlines the clinical processes and improves and secures the quality of patient care.
